

Homework 10 Computational Instructions

For this computational assignment, we will use need to use a dataset of images that you can download [here](#). There you can download a zip folder containing the data files, in the directory `country_flags_npy/`, as well as a file `country_names.csv` and a `hw10.ipynb` file containing further instructions on using the data and as well as problems. Note that the data files are reasonably large – approximately 220MB after unzipped, so make sure you save the files somewhere with adequate space.
